

TO INFINITY AND BEYOND!

Autumn 1 -
2019

AREAS OF LEARNING

As Scientists, we will ask questions about our planet. We will explore our place in the solar system and beyond. We will learn how day and night happens and what creates our seasons.

As Artists, we will enjoy the work of others and discuss our likes and dislikes. We will create work in the style of Peter Thorpe and evaluate our finished pieces.

As Designers, we will learn about how levers and pulleys move objects. We will plan, make and evaluate moon buggies.

Community

As people connected with our community, we will consider the impact that we have on our school and local world. We will involve the community by sharing a celebration of songs and supporting traditions such as Harvest.

Environment

As people who care about the future of our planet, we will consider the impact that our choices have on life on Earth. We will pledge to make a difference to our school community in achievable ways, understanding that one small action supports a bigger picture.

Spiritual and Moral

As people who know right from wrong, we will explore ways to make positive changes and set targets for ourselves. We will practice unity through understanding what we have to be thankful for and what basic needs others do not have in place.

Communication

As good communicators, we will practice active listening and building on ideas of others. We will use formal debating approaches to help to articulate our viewpoint. We will become story-tellers and explore stories, retelling them in our own ways.
